

BLACK SABLE™ RISK™

Protect your Profits

Heatwave & El Niño Profit Preparedness

Hotter, drier conditions and extreme heat from the current heatwave and expected El Niño conditions can significantly increase profit risk through business interruption, stock loss, rising operating costs, service disruption, insurance pressure and reduced productivity.

Key Profit Risks

Business Interruption

Heat, outages, fire or storm disruption can stop operations and revenue.

Stock & Equipment Loss

Spoilage, heat damage and system failure can destroy stock or critical assets.

Rising Energy Costs

Cooling demand, backup power and fuel can sharply increase operating costs.

Insurance & Underinsurance

Outdated values and unmanaged risks can leave businesses exposed to major financial loss.

Reduced Productivity

Heat stress, fatigue and absenteeism can lower output and service quality.

Customer & Contract Impact

Delays, closures and service failures can damage relationships, reputation and future income.

What You Can Do

- ✓ Review your key operational and revenue risks.
- ✓ Protect critical stock, equipment and temperature-sensitive assets.
- ✓ Service cooling, power and backup systems before peak strain.
- ✓ Check business continuity plans, supplier dependencies and emergency actions.
- ✓ Update insurance values, records and risk controls.
- ✓ Act early to reduce the likelihood and impact of disruption.
